

Redact-It® Enterprise

Automated Redaction for the Enterprise

Redact-It Enterprise can perform batch redactions quickly with no scripting or complicated configuration needed. Or it can be integrated into your enterprise content management system to automatically remove sensitive content as an effortless part of your business process.

Today's technology makes connectivity and data sharing easier than ever, but with greater connectivity comes an increased risk of misuse of data. Email, the internet, social networks and open formats like PDF make it easy to share content anywhere, anytime—even when the information is not meant to be shared. In response, organizations both large and small, across all industries, are implementing redaction technology in their business processes to enable information sharing while ensuring sensitive data remains secure and compliance objectives are met.

Organizations can use Redact-It® Enterprise to protect sensitive content while simultaneously giving its employees and business partners access to business-critical content. Redact-It completely removes redacted content from the output file so your enterprise can confidently move documents through the workflow process. Because Redact-It only transfers visible text to the new output file, there is no hidden text, document properties or other unseen document metadata to worry about.

Automated redaction how you need it

Folder Monitoring

Redact-It makes redaction as easy as putting documents in a folder. Simply create a text file with all the needed redaction criteria and put it in a Windows folder. Tell Redact-It to watch that folder and specify where to put the resulting redacted document. Any document placed in that folder will automatically be processed.

Templates

Create templates when you need to redact the same area on commonly formatted documents like forms. Quickly create the redaction template using Redact-It Desktop (included with Redact-It) by simply drawing a box, then have Redact-It apply it as needed—automatically.

Use Redact-It to:

- Achieve regulatory compliance for information sharing
- Protect customer and employee privacy information
- Meet your organization's records management strategies
- Securely share documents anywhere

Redact-It comes with pre-set search macros for common privacy patterns like Social Security numbers, telephone numbers, credit card numbers and more.

Redact-It Enterprise supports virtually any format, including Microsoft Office formats, email messages, PDF, TIFF, Corel WordPerfect and more.

Technical Specifications

Windows Server 2008 R2
Office 2007 or 2010
IIS 7.0

Use Redact-It to:

- Automatically find and remove sensitive data in unstructured documents and forms
- Replace tedious, manual redaction with highly efficient automated processes
- Protect intellectual property or personal information from unintentional disclosure, theft or other misuse
- Meet regulatory requirements for privacy and disclosure
- Make data protection a seamless part of everyday workflows, not a separate process
- Integrate with content and records management

An integrated part of a workflow

Get the most out of Redact-It by integrating it with your electronic content management or records management system. With minimal scripting, Redact-It can be hooked into SharePoint, EMC Documentum, OpenText Content Server, IBM FileNet or any other document repository. It can automatically process new files as they enter the system or before a document is shared outside the system.

Redact-It: An effortless part of your business process

Redact-It is smart redaction software that protects people and business by removing sensitive information from documents. Search for words or phrases to redact, or use pre-defined patterns for common privacy information like Social Security numbers, telephone numbers, account numbers and email addresses. Then save the redacted file as a new TIFF or text-searchable PDF, leaving the original secure and unaltered.

Pattern Matching

Need to redact account numbers, ID numbers, or other unique elements? Just use regular expressions to create custom search patterns. Redact-It comes with built-in search for standard patterns like phone numbers, Social Security numbers and credit card numbers.

OCR TIFF and PDF

Scanned or otherwise “flat” documents won’t slow you down with Redact-It. The OCR (Optical Character Recognition) option renders documents as text-searchable, creating a text layer over the document image. Redactions are applied to both the text layer and the image layer.

Review Draft

When others need to review redactions assigned before they are actually performed, a redaction draft (in PDF) can be created for this purpose. Each redaction can be reviewed along with the reason assigned to that redaction.

Bates Numbers, Watermarks and Stamps

Redact-It can add watermarks, margin banners, image stamps and Bates numbers to the finalized output. Note the document as a draft or final copy or include a copyright or legal notice. You can also insert an image stamp, indicating the document was reviewed or approved for example.

Not just covered, but removed!

Redact-It removes all redacted information in the redaction process without any danger of overwriting the original file. Redact-It creates a new redacted version of the document as PDF or TIFF. When outputting to PDF, original documents that are text searchable will remain text searchable (less the redacted information) in the redacted version.
